Abstracts

According to our (Global Info Research) latest study, the global Single Acting Bellows Actuators market size was valued at US\$ 325 million in 2024 and is forecast to a readjusted size of USD 442 million by 2031 with a CAGR of 4.5% during review period.

A Single Acting Bellows Actuator is a type of actuator that uses a bellows (a flexible, accordion-like structure) to convert pressure or force into mechanical motion. Unlike double-acting actuators, which can move in both directions (forward and backward), single-acting bellows actuators can only generate motion in one direction, typically assisted by an external force like a spring or gravity for the return stroke.
