Abstracts

The global Single Axis Automatic Tapping Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A single-spindle automatic tapping machine is a machine used to automatically perform tapping operations. Tapping is a metalworking process used to cut threads in threaded holes. Single-axis automatic tapping machines have only one working axis and are usually used to process the threading of a single workpiece. This type of machine usually has a tapping tool and a related control system to control the movement and process parameters of the tapping tool in an automated manner. In operation, the workpiece is placed on the table, and the tapping tool is positioned to the starting position of the threaded hole. Subsequently, the machine will automatically control the movement of the tapping tool to complete the thread cutting according to the predetermined parameters and procedures. The single-axis automatic tapping machine is suitable for the situation where a single workpiece needs to be threaded. It can greatly improve the efficiency and accuracy of threading, and reduce the labor intensity of the operator. This type of machine is commonly used in scenarios with larger workpiece sizes or simpler threading needs. For situations where multiple workpieces need to be handled or higher productivity is required, a multi-spindle automatic tapping machine may be more suitable.
