According to our (Global Info Research) latest study, the global Single-axis Pneumatic Drilling Machine market size was valued at US\$ 887 million in 2024 and is forecast to a readjusted size of USD 1140 million by 2031 with a CAGR of 3.6% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The single-axis pneumatic drilling machine uses compressed air as power, converts air pressure energy into mechanical energy through a pneumatic motor or cylinder to drive the drill to rotate or impact. Compared with electric or hydraulic drive, the pneumatic system has the characteristics of no risk of electric sparks and strong environmental adaptability (suitable for humid and dusty environments). The single-axis pneumatic drilling machine controls the speed, feed speed and impact force of the drill bit through air pressure to achieve drilling processing of materials such as metal, plastic, and wood. Its processing accuracy and efficiency are affected by air pressure stability, drill bit material, and workpiece material.
