According to our (Global Info Research) latest study, the global Single B Cell Antibody Service market size was valued at US\$ 449 million in 2024 and is forecast to a readjusted size of USD 616 million by 2031 with a CAGR of 4.6% during review period.

Single B cell antibody service is a specialized scientific offering that focuses on isolating and exploiting individual B cells from the immune system to generate monoclonal antibodies. It involves advanced techniques to identify and capture antigen-specific B cells directly from various biological samples, such as blood, lymph nodes, or spleen tissues. These captured B cells are then cultured, their antibody-encoding genes are cloned and expressed in appropriate expression systems, enabling the production of highly specific and homogeneous monoclonal antibodies. This service is crucial for a wide range of applications in biomedical research, diagnostics, and therapeutics.
