Abstracts

The global Single Beam Safety Light Curtain market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Single-beam photoelectric safety switches, also known as through-beam photoelectric safety switches, are non-contact safety sensors used to protect hazardous areas. They consist of a transmitter and receiver facing each other, producing an invisible beam of light. The transmitter produces a beam of light that is directed at the receiver. If this beam is interrupted by an obstacle, such as a hand or object, the receiver detects the interruption and triggers an alarm or protective action. Single beam safety light curtains are often used in areas where a quick response to the interruption of the light beam is required to prevent injury or damage. They are used, for example, in industrial manufacturing, warehousing, logistics or robotics. Modern single-beam safety light barriers often have advanced features such as self-monitoring, background suppression, integrated evaluation units and communication interfaces for easy integration into automated systems.

This report studies the global Single Beam Safety Light Curtain production, demand, key manufacturers, and key regions.
