In 2025, global Single-Cell RNA Sequencing System production reached approximately 21.55 k units, with an average global market price of around USD 55,000 per unit.

The gross profit margin of major companies in the industry is between 50.00%-66.00%.

Single-Cell RNA Sequencing System is an integrated analytical platform designed to isolate individual cells, prepare sequencing libraries, and generate transcriptomic data at single-cell resolution. The system combines microfluidics or other cell partitioning technologies with molecular biology workflows and bioinformatics analysis to reveal cellular heterogeneity and gene expression profiles. It is widely used in cancer research, immunology, developmental biology, neuroscience, regenerative medicine, and precision medicine. The product scope includes complete single-cell RNA sequencing instruments and integrated analytical systems, excluding standalone sequencing reagents, consumables, and next-generation sequencing instruments.

The industry chain begins with upstream suppliers of microfluidic components, precision optical modules, electronic components, biochemical reagents, enzymes, nucleic acid extraction materials, chips, and software infrastructure. Midstream includes system design, instrument manufacturing, fluidic integration, software development, calibration, and quality assurance. Downstream users include pharmaceutical companies, biotechnology enterprises, hospitals, academic research institutes, clinical laboratories, and contract research organizations. Increasing demand for precision medicine,

biomarker discovery, cell atlas projects, and translational research continues to drive market growth and technology upgrades.
