A single chamber washer disinfector is a specialized cleaning and sterilizing equipment used primarily in healthcare and laboratory settings to effectively clean, disinfect, and sterilize instruments, medical devices, and laboratory glassware in a single, integrated process. The device operates by combining washing, disinfecting, and drying stages within one chamber, ensuring that items are thoroughly cleaned and disinfected before they are either stored or reused. Typically, the washer disinfector utilizes a combination of high-pressure water jets, detergents, disinfectants, and thermal disinfection (through heated water or steam) to remove contaminants such as organic matter, blood, and microbial pathogens. Single chamber models are designed for smaller to medium-sized volumes, providing an efficient and space-saving solution for medical and laboratory facilities where high standards of hygiene and infection control are required.
