Abstracts

The global Single-chip Flash Card Reader Controller market size is expected to reach \$ 116 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

Single-chip Flash Card Reader Controller is a highly integrated memory-card interface controller that combines card detection, command processing, host interface control, data transfer logic, error handling, power management, and protocol support within one chip, enabling compact and cost-efficient access to SD, microSD, and other removable flash storage formats. Compared with a general flash card reader controller, this product definition emphasizes single-chip integration, smaller peripheral component requirements, simplified circuit design, lower system cost, and stable compatibility for compact card-reading devices. In 2025, production was 41 million units and the average price was USD 1.8 per unit. The industry's capacity utilization rate in 2025 was about 70%, and the average gross margin was around 30%. Upstream, the key inputs mainly include silicon wafers, photoresists, electronic specialty gases, and packaging materials, with representative suppliers such as Shin-Etsu Chemical, JSR, and Air Liquide providing core semiconductor materials and process inputs. The midstream segment focuses on single-chip controller architecture design, memory card protocol integration, host interface adaptation, data transfer logic, signal integrity optimization, power management, firmware compatibility, wafer fabrication, packaging, testing, and reliability validation, which together determine reading stability, transfer efficiency, card compatibility, power consumption, integration level, and cost competitiveness. Downstream, Single-chip Flash Card Reader Controller is mainly used in personal computers, external card readers, and docking stations, where it helps notebooks, desktops, peripheral accessories, and expansion devices provide convenient access to removable flash storage, with representative customers including Lenovo, Dell

Technologies, and Anker Innovations.

Single-chip Flash Card Reader Controller demand will be tied to peripheral products that need small size, low cost, and stable removable-storage access. In personal computers, card-reading functions remain useful for cameras, creators, industrial users, and data transfer between legacy devices. External card readers and docking stations prefer single-chip solutions because they reduce board area, peripheral components, power consumption, and assembly complexity. The product is unlikely to rely on explosive new demand, but on steady replacement, accessory integration, and long-tail storage-card use. Competition will focus on card compatibility, driver maturity, transfer stability, compact packaging, low failure rate, and cost control.
