Abstracts

On the basis of the traditional two-chip OBU, the single-chip OBU simplifies the hardware resources and uses the 5.8G+MCU+ESAM mode to complete the function of the single-chip OBU. The program uses the 7816 interface to connect the ESAM module supporting the national secret algorithm with the main control MCU. The MCU analyzes the 5.8G signal through the SPI interface and distributes the corresponding instructions to the ESAM to realize the complete transaction process of the lane system.
