Abstracts

The global Single-chip USB-to-UART Bridge ICs market size is expected to reach \$ 262 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

Single-chip USB-to-UART Bridge ICs are highly integrated interface conversion chips that combine USB protocol processing, UART communication logic, baud-rate generation, data buffering, power management, driver communication, and signal control within one chip, enabling host systems to connect with serial devices through a compact and simplified hardware design. Compared with standard USB-to-UART bridge chips, this product definition emphasizes single-chip integration, reduced peripheral components, smaller board area, lower system complexity, stable virtual serial communication, and easier deployment in embedded devices, development tools, instruments, and control modules. In 2025, production was 64 million units and the average price was USD 2.5 per unit. The industry's capacity utilization rate in 2025 was about 70%, and the average gross margin was around 33%. Upstream, the key inputs mainly include silicon wafers, photoresists, electronic specialty gases, and packaging materials, with representative suppliers such as Shin-Etsu Chemical, JSR, and Air Liquide providing core semiconductor materials and process inputs. The midstream segment focuses on single-chip architecture design, USB protocol integration, UART communication logic, baud-rate generation, signal integrity optimization, power management, driver compatibility, wafer fabrication, packaging, testing, and reliability validation, which together determine connection stability, transmission accuracy, system compatibility, power efficiency, integration level, and cost competitiveness.

Downstream, Single-chip USB-to-UART Bridge ICs are mainly used in electronics manufacturing, industrial control, medical equipment, and automotive electronics, where they help development boards, test equipment, control modules, diagnostic instruments,

and in-vehicle systems realize convenient serial communication through USB connectivity, with representative customers including Foxconn, Siemens, and BYD.

Single-chip USB-to-UART Bridge ICs demand will be driven by embedded products that need serial communication but have limited board space, cost budget, and development resources. In electronics manufacturing, these chips simplify test fixtures, development boards, and production debugging tools. Industrial control equipment benefits from compact and stable serial access across long product lifecycles, while medical and automotive applications require reliable connection behavior for diagnostics, configuration, and maintenance. Compared with discrete or more complex interface designs, single-chip solutions are easier to deploy at scale. Competition will focus on integration level, driver compatibility, baud-rate accuracy, signal robustness, low power consumption, package size, and lifecycle supply.
