## Abstracts

According to our (Global Info Research) latest study, the global Single Column Robot Palletizers market size was valued at US\$ 1389 million in 2025 and is forecast to a readjusted size of US\$ 2297 million by 2032 with a CAGR of 7.4% during review period.

In 2025, global Single Column Robot Palletizer output reached about 84,000 units, backed by ~108,000 units of production capacity, with average unit price \$16,000, and an average gross margin of about 34%. Single Column Robot Palletizers are compact, vertically oriented automated palletizing systems that use a single upright column with a robotic arm or gripper moving along one vertical axis to pick, place, and stack cartons, bags, cases, or bundles onto pallets in predefined patterns, offering a space-efficient, cost-effective alternative to multi-axis or gantry palletizers for low-to-medium throughput lines. The supply chain typically starts upstream with core components such as servo motors, linear guides, reducers, sensors, PLCs, HMIs, and safety systems supplied by industrial automation vendors; subsystem suppliers provide end-of-arm tooling (vacuum, clamp, or fork grippers), vertical lifting modules, and guarding; OEMs/system integrators design and assemble the full palletizer, integrate control software, pattern logic, and line interfaces; channel partners or direct sales teams handle customization, installation, and commissioning; and downstream, end users in food & beverage, packaging, chemicals, logistics, and consumer goods operate the systems with ongoing support from service providers for maintenance, spare parts, upgrades, and retrofits.
