## Abstracts

According to our (Global Info Research) latest study, the global Single-crystal Diamond Wafers market size was valued at USD 6 million in 2022 and is forecast to a readjusted size of USD 27 million by 2029 with a CAGR of 24.5% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Single-crystal diamond wafers enable critical advances in both RF power technology used for 5G communications and satellites; as well as in the power electronics used in electric vehicles. Heat dissipation has emerged as the key limiting factor in making power electronics and RF power applications ever more efficient in everything from satellites, 5G base stations, electric cars, renewable energy generation and transmission, LIDARs, etc. Using modern wafer bonding technologies, single-crystal diamond (SCD) wafers can be produced combining the ultimate thermal substrate (that is, diamond) with any proven semiconductor such as Si, SiC, GaN, etc.
