The global Single-crystal Diamond Wafers market size is expected to reach \$ 27 million by 2029, rising at a market growth of 24.5% CAGR during the forecast period (2023-2029).

Single-crystal diamond wafers enable critical advances in both RF power technology used for 5G communications and satellites; as well as in the power electronics used in electric vehicles. Heat dissipation has emerged as the key limiting factor in making power electronics and RF power applications ever more efficient in everything from satellites, 5G base stations, electric cars, renewable energy generation and transmission, LIDARs, etc. Using modern wafer bonding technologies, single-crystal diamond (SCD) wafers can be produced combining the ultimate thermal substrate (that is, diamond) with any proven semiconductor such as Si, SiC, GaN, etc.

This report studies the global Single-crystal Diamond Wafers production, demand, key manufacturers, and key regions.
