Abstracts

The global Single Domain Antibody Customization Service market size is expected to reach \$ 1071 million by 2032, rising at a market growth of 15.4% CAGR during the forecast period (2026-2032).

Single Domain Antibody Customization Service refers to personalized discovery, screening, affinity optimization, humanization, multivalent or multispecific design, expression, and purification services based on VHH, VNAR, or human VH single-domain antibodies, aimed at customers in research, diagnostics, and early-stage drug development. The service typically covers antibody library selection, phage or yeast display screening, functional validation, sequence optimization, and delivery of antibodies in customer-specified formats. Key upstream inputs include antigen proteins or peptides, immunized animal resources, antibody libraries and display systems, expression vectors, host cells, culture media, chromatography consumables, sequencing reagents, and functional assay reagents. Major downstream customers include pharmaceutical companies, biotechnology firms, CRO/CDMO providers, universities, research institutes, and hospital laboratories, applying the service for research exploration, early drug development, diagnostic reagent development, molecular imaging, and cell therapy binding domains. The global gross margin in 2025 is estimated at approximately 50%-72%.

The single-domain antibody customization service market is currently in a rapid growth phase, driven by increasing demand from research, diagnostics, and early-stage drug development customers for personalized antibody solutions. Service providers offer highly customized products through antibody library screening, affinity maturation, humanization, multivalent and multispecific design, as well as expression and purification. Market participants include CROs and platform-based companies

specializing in research and discovery services, as well as innovative pharmaceutical companies with internal R&D platforms. Due to the small molecular size, high stability, and engineering flexibility of single-domain antibodies, these services are particularly competitive in complex target binding, tissue penetration, and molecular delivery scenarios.

From the supply perspective, European and North American companies hold advantages in technological accumulation, platform capability, intellectual property protection, and early preclinical development experience, with some platforms available for external licensing. Chinese companies have rapidly developed capabilities in antibody library construction, discovery services, humanization platforms, and multispecific antibody design, extending from research customization to early drug development. The overall market remains fragmented, with leading companies relying on platform technology barriers, complex target screening, and engineering expertise, while smaller providers compete through rapid delivery, flexible customization, and cost control.

Future trends focus on fully humanized platforms, multispecific and multivalent antibody design, half-life optimization, AI-assisted antibody discovery, and high-throughput screening systems. Platforms are evolving from delivering single binders to becoming critical sources for multispecific antibodies, cell therapy binding domains, imaging probes, and targeted delivery modules. Integration of deep sequencing, synthetic libraries, phage and yeast display systems, and machine learning will further enhance discovery efficiency and candidate developability. Companies capable of providing the full workflow—from discovery, affinity maturation, humanization, stability optimization to early developability assessment—will gain a competitive edge.

Industry challenges include platform homogenization, patent barriers, clinical translation risks, immunogenicity control, half-life optimization, and manufacturing scale-up complexity. Some VHH and VNAR antibodies derived from non-human species require thorough humanization and safety evaluation before therapeutic development. As more CROs and research service providers enter the single-domain antibody customization field, early-stage service pricing competition will intensify. In the long term, platforms with high-quality antibody libraries, complex target screening capabilities, multi-format engineering, and early clinical translation experience will lead the market.

This report studies the global Single Domain Antibody Customization Service demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Single Domain Antibody Customization Service, and provides market size (US\$ million) and Year-over-Year (YoY) growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Single Domain Antibody Customization Service that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Single Domain Antibody Customization Service total market, 2021-2032, (USD Million)

Global Single Domain Antibody Customization Service total market by region & country, CAGR, 2021-2032, (USD Million)

U.S. VS China: Single Domain Antibody Customization Service total market, key domestic companies, and share, (USD Million)

Global Single Domain Antibody Customization Service revenue by player, revenue and market share 2021-2026, (USD Million)

Global Single Domain Antibody Customization Service total market by Type, CAGR, 2021-2032, (USD Million)

Global Single Domain Antibody Customization Service total market by Application, CAGR, 2021-2032, (USD Million)

This report profiles major players in the global Single Domain Antibody Customization Service market based on the following parameters - company overview, revenue, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Creative Biolabs, Charles River Laboratories, Twist Bioscience, GenScript, Synbio Technologies, ProSci Incorporated, Rockland Immunochemicals, RayBiotech, Fortis Life Sciences, Antibody Design Labs, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the world Single Domain Antibody Customization Service market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US\$

Millions), by player, by regions, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
