## **Abstracts**

The single-engine two-seat carbon fiber composite light sport aircraft is a light aircraft made of carbon fiber composite materials. It is mainly designed for personal recreational flying, training or short-distance transportation. The aircraft is usually powered by one engine and has two seats for the pilot and passenger. Due to the use of carbon fiber composite materials, this aircraft is lighter and stronger than traditional metal structure aircraft, and has higher performance and efficiency. It usually has a smaller body size and flexible maneuverability, suitable for operation at short take-off and landing sites, and is a popular personal aircraft and flight training tool.

According to our (Global Info Research) latest study, the global Single-Engine, Two-Seat Carbon Fiber Composite Light Sport Aircraft market size was valued at US\$ 1142 million in 2023 and is forecast to a readjusted size of USD 1621 million by 2030 with a CAGR of 5.1% during review period.

At present, light sport aircraft are developing rapidly abroad, but they are still in their infancy in our country. Therefore, how to reduce the manufacturing cost of light aircraft during the manufacturing process has become a key issue in the current manufacturing of light sport aircraft. According to the experience of Western developed countries in manufacturing light sport aircraft, the use of carbon fiber composite materials is currently one of the effective ways to reduce the construction cost of light sport aircraft. Therefore, it is of great significance to study the application of carbon fiber composite materials in light aircraft structures.
