Abstracts

According to our (Global Info Research) latest study, the global Single Hinged Corrugated Expansion Joint market size was valued at US$ 237 million in 2025 and is forecast to a readjusted size of US$ 319 million by 2032 with a CAGR of 4.4% during review period.

The Single Hinged Corrugated Expansion Joint is a specialized piping compensation component designed primarily to absorb angular displacement within a single plane. It consists of a bellows assembly integrated with components such as hinge pins, hinge plates, and mounting plates connected to the end pipes; this configuration enables it to effectively withstand the pressure thrust (blind-end force) generated by the internal medium.

Upstream raw materials primarily include metals for bellows, end pipes, flanges, hinge plates, hinge pins, and fasteners. Bellows are typically manufactured from stainless steels (e.g., 304, 316L, 321) or nickel-based alloys (e.g., Inconel), which determine temperature and pressure resistance, fatigue life, and media compatibility. End pipes and flanges are generally made of carbon steel, stainless steel, or alloy steel, while hinge plates and pins require sufficient strength to withstand internal pressure thrust and external loads. Midstream processes encompass bellows forming, welding, heat treatment, assembly, non-destructive testing (NDT), pressure testing, and displacement performance verification. Downstream applications primarily serve high-temperature and high-pressure piping systems, district heating networks, petrochemical facilities, power generation piping, metallurgical pipelines, and marine/offshore piping systems.

In 2025, global sales volume is estimated at approximately 355,000 units, with a

mainstream ex-factory price of around 650 USD per unit and a gross profit margin of approximately 26%?40%.
