According to our (Global Info Research) latest study, the global Single Layer High Speed Extrusion Coating Machine market size was valued at US$ 237 million in 2025 and is forecast to a readjusted size of US$ 314 million by 2032 with a CAGR of 3.2% during review period.

In 2025, the global production of single layer high speed extrusion coating machines reached 769 units, with an average selling price of USD 300,000 per unit. The annual production capacity of single layer high speed extrusion coating machines worldwide was approximately 1,500 units, with a gross margin of about 27.2%. A single layer high speed extrusion coating machine is an industrial device used for continuous coating of materials, widely applied in the manufacturing of films, coatings, composite materials, and other related fields. Its main characteristic is the use of an extrusion method to uniformly apply coating materials or raw materials onto the substrate surface at high speed. The upstream of the single layer high speed extrusion coating machine industry chain includes the coating die head, precision feeding system, and drive system; the midstream consists of single layer high speed extrusion coating machine manufacturers; and the downstream is mainly used in lithium-ion batteries and new energy material processing.

Currently, the single layer high speed extrusion coating machine market is maintaining strong demand, benefiting from the sustained expansion of the new energy industry, particularly in lithium-ion battery manufacturing. As a core piece of process equipment in the battery electrode coating stage, the machine's high coating speed, superior thickness uniformity, and low material waste make it a critical enabler for downstream manufacturers seeking to improve production efficiency and product yield.
