The global Single-Line Centralized Lubrication System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The single-line centralized lubrication system is a centralized lubrication system in which the lubricating medium is supplied to the distributor through a main pipeline under intermittent pressure, and then sent to each lubrication point. The single-line system is mostly used in small and medium-sized lubrication systems, and the oil supply pressure and oil supply volume are relatively small. For example, the single-line system can be used for mobile machinery.
