According to our (Global Info Research) latest study, the global Single Mode Fiber Optic Isolator market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The single mode fiber optic isolator is a passive magneto-optical device that uses the Faraday effect of magneto-optical crystals to isolate reflected light and only allows light to be transmitted in a single direction, which can effectively avoid the reverse direction caused by the reflection of the light source (usually a laser) effect of light on its spectral purity.

Single mode fiber optic isolators have the characteristics of high isolation, low insertion loss, and high power tolerance, and are widely used in fiber lasers, fiber amplifiers, laser communications, fiber sensing and other fields.
