Single and dual axis inclinometers are instruments designed based on the principle of gravity for measuring the tilt angle of objects. Single axis inclinometers focus on single axis tilt measurement, with a relatively simple structure and low cost, suitable for scenarios with relatively single requirements for tilt measurement; A dual axis inclinometer can simultaneously measure the tilt angle of two mutually perpendicular axes, providing more comprehensive tilt information. It is commonly used in fields that require high accuracy and comprehensiveness in tilt measurement. Both play important roles in many industries such as industry, construction, aerospace, geological monitoring, etc., helping people to real-time grasp the tilting status of objects, ensuring engineering safety, normal equipment operation, and scientific research.
