The global Single Nucleotide Polymorphism (SNP) Genotyping market size is expected to reach \$ 110800 million by 2032, rising at a market growth of 20.6% CAGR during the forecast period (2026-2032).

Single Nucleotide Polymorphism (SNP) Genotyping is the measurement of genetic variations of single nucleotide polymorphisms (SNPs) between members of a species. It is a form of genotyping, which is the measurement of more general genetic variation. SNP genotyping is not only the genetic markers present in most, but also the most promising markers. SNP genotyping as the most potential for development of molecular markers, it cans achieve large-scale highly automated, thus it is more suited to a huge number of detection and analysis, has been widely used in biology, agriculture, medicine, biological evolution and other fields.

Global Single Nucleotide Polymorphism (SNP) Genotyping key players include Illumina, Affymetrix, Applied Biosystems, Agilent Technologies, Beckman Coulter, etc. Global top five players hold a share about 65%. North America is the largest market, with a share about 40%, followed by Europe and Japan, having a total share about 35 percent. In terms of product, the segment includes Transversion, Transition.
