Single nuclide ? Instrument Scale Source (SNM) is a calibration standard used for radiation measurement. It is a sealed radioactive source containing a single ? Emitting nuclides, usually strontium-90 (Sr-90), are used to calibrate the SNM source to known activity and to determine the detection efficiency of the calibrated instrument. This enables the instrument to accurately measure the radiation level in a given environment. The use of calibration sources such as SNM is crucial for ensuring accurate and reliable data from radiation measurement instruments, which is crucial in many fields, including nuclear power plants, medical facilities, and environmental monitoring.
