According to our (Global Info Research) latest study, the global Single-Phase Electronic Prepaid Energy Meter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Single-phase electronic prepaid energy meter, referred to as single-phase smart card meter, is used to measure AC single-phase active energy with a rated frequency of 50Hz, and realizes the management function of paying first and then using electricity. The single-phase electronic prepaid energy meter uses CPU cards (i.e. smart cards) and advanced microelectronics technology for data collection, processing and storage. Its performance indicators comply with the national standards for electricity card meters. It has powerful functions that cannot be decrypted, and is small in size. It has the characteristics of light weight and high reliability.

The electric power industry has been comprehensively reorganized, the integrated monopoly operation model has been broken, and it has entered an era of comprehensive competition and innovation. Electric power companies are facing a fundamentally different operating environment and competition rules than in the past, and their operating mechanisms and control and management models will undergo fundamental changes. This is a huge challenge and opportunity for power generation companies, power grid companies, power distribution companies, power sales companies, and even users. Successful people will become industry leaders, while losers will be merged or driven out of the market. More than ever, utilities need the ability of their senior executives to navigate change. 'Electricity price mechanism' is the center of the transformation of the electric power industry. Electricity prices and costs will become central issues for power enterprise strategy and management innovation in

the new operating environment. Regulatory changes and the resulting large-scale mergers and acquisitions of power generation companies, nationwide interconnection, west-to-east power transmission, technological innovation, new energy and other factors will continue to promote the continuous changes in the power industry structure and market structure as well as the competition landscape, thus affecting the power energy industry structure. , market structure, electricity prices, strategies, investment strategies and competitive positions of power companies have a profound impact.
