Single-phase guideway worktable is a linear motion system used for precise positioning of workpieces or equipment in various industrial applications. The guide rail platform is designed with a single-phase motor to provide high accuracy and stability during linear movement of the workpiece or equipment. The single-phase guide rail platform consists of a guide rail and a slider that moves along the guide rail, providing stable and accurate linear motion. The slider is typically driven by a single-phase motor that provides the force required to move the workpiece or device along the guide rail. One of the main advantages of a single-phase guideway workbench is its high accuracy and repeatability. The workbench can achieve positioning accuracy within micrometers, which is very suitable for applications requiring accurate and consistent positioning. In addition, the compact design of the table makes it suitable for space constrained applications.
