Abstracts

The global Single Phase Immersion Cooling Fluids market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Single-Phase coolant never changes state, nor does it boil or freeze, always remaining in its liquid form. The coolant is pumped into a heat-exchanger where heat is transferred to a cooler water-circuit. This technique uses “open baths”, as there is little to no risk of the coolant evaporating.

This report studies the global Single Phase Immersion Cooling Fluids production, demand, key manufacturers, and key regions.
