According to our (Global Info Research) latest study, the global Single-phase Shaded Pole Motor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Shaded Pole Motor is one of the single-phase AC motors, which usually adopts cage-type inclined slot cast aluminum rotor. The rotor group is mainly composed of cast aluminum rotor, shaft, thrust washer to prevent the rotor from moving forward and backward, and gasket to adjust the movement. Stator group is mainly composed of short circuit ring and main stator core. The wire package assembly is mainly composed of coil, framework, lead wire or thermal protector and relevant insulation binding materials. The advantages of the shaded pole motor are its simple structure, no additional windings and capacitors, and its disadvantages are low efficiency and large slip. The drainage pump used by the air conditioner embedded machine is a typical shaded pole motor with low defect rate. The general fault is that the motor is dirty and blocked.
