According to our (Global Info Research) latest study, the global Single Point Laser Distance Sensors market size was valued at USD 878.7 million in 2023 and is forecast to a readjusted size of USD 1234.5 million by 2030 with a CAGR of 5.0% during review period.

Single point triangulation sensors use triangulation principles to measure the distance to an object using only one point of light. The basic idea is to point a point light source at the object to be measured and analyze the position of the reflected light to determine the distance. These single point sensors are useful in situations where it is necessary to measure the distance to an object accurately and at high speed.
