The global Single Point Laser Distance Sensors market size is expected to reach \$ 1234.5 million by 2030, rising at a market growth of 5.0% CAGR during the forecast period (2024-2030).

Single point triangulation sensors use triangulation principles to measure the distance to an object using only one point of light. The basic idea is to point a point light source at the object to be measured and analyze the position of the reflected light to determine the distance. These single point sensors are useful in situations where it is necessary to measure the distance to an object accurately and at high speed.
