According to our (Global Info Research) latest study, the global Single-Rotor Ultralight Helicopter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The global market for Ultralight Aircraft is expected to grow at a significant rate during the forecast period from 2023 to 2031. Growth in this market is attributed to several factors, including the increasing adoption of ultralight aircraft for recreational purposes and the growing demand for low-cost aircraft in the emerging markets. Single-Rotor Ultralight Helicopters are expected to contribute to this market growth, due to the benefits they offer, such as lower cost of acquisition, easier maintenance, and simplified regulatory requirements. Other factors driving the market growth include improvements in technology, higher fuel efficiency and environmental standards, and increasing demand for aerial survey and agricultural applications. Although the market for Single-Rotor Ultralight Helicopters is expected to grow, certain factors such as the availability of low-cost substitutes and high manufacturing costs may affect market growth. Additionally, ongoing developments and advancements in drone technology may also pose a challenge to the Single-Rotor Ultralight Helicopter market in the coming years.

Single-Rotor Ultralight Helicopter is a type of light helicopter that is designed to operate with a single rotor blade. This type of helicopter is categorized as an ultralight aircraft, which means that it is typically lightweight, simple to operate and maintain, and requires a lower level of pilot training to fly. Single-Rotor Ultralight Helicopters are often used as personal aircraft for recreational purposes or for aerial photography and surveying.

These helicopters are typically powered by small piston engines and have a range of up to several hundred miles on a single tank of fuel. They are also capable of hovering in a stationary position, which makes them ideal for tasks such as crop-dusting, aerial photography, and surveying.

The design of a Single-Rotor Ultralight Helicopter allows it greater maneuverability and agility during flight, as well as a higher degree of stability and reliability. They are also generally more affordable than larger, more complex helicopters, which makes them a popular choice among private helicopter owners and operators.
