## Abstracts

The global Single Row Slewing Ring market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The slewing bearing is generally composed of an inner ring and an outer ring, and also has a split structure of the inner ring or the outer ring. The inner or outer ring can be machined with teeth and have mounting holes at the same time, which makes the connection between adjacent components easier and faster. Through the joint action of the bearing raceway and the rolling element protection frame or the spacer assembly, the slewing ring can bear one-way load, two-way load, overturning moment and combined load in any direction
