## Abstracts

According to our (Global Info Research) latest study, the global Single Screw Feeder market size was valued at US\$ 2247 million in 2025 and is forecast to a readjusted size of US\$ 3224 million by 2032 with a CAGR of 5.3% during review period.

In 2025, global sales of single screw feeders reached 520,000 units, with an average selling price of US\$4,200 per unit. A single screw feeder is a mechanical device that uses rotating helical blades to continuously convey and quantitatively feed materials within a closed or semi-closed trough. It mainly consists of a screw shaft, helical blades, a drive motor, a reducer, bearing housing, and a conveying shell. It can achieve stable conveying and accurate metering of powders, granules, and small lumps, and features simple structure, good sealing, uniform conveying, and low maintenance costs. It is widely used in automated feeding stages in production lines of food processing, chemicals, building materials, cement, environmental protection, plastics processing, and agricultural feed industries. Upstream raw materials mainly include carbon steel or stainless steel plates, geared motors, bearings, and seals. Upstream suppliers are mainly steel processing companies, motor manufacturers, and transmission component manufacturers. The global industry's total production capacity is approximately 650,000 units, with an average gross profit margin of approximately 19%. With the improvement of industrial automation and the increasing demand for upgrading powder material conveying systems, the application of single screw feeders in continuous production lines continues to expand. In the future, there will still be stable demand and equipment upgrade opportunities in the fields of environmental protection, automated food production and new material powder conveying.
