## Abstracts

The global Single Screw Plastic Extruder market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A Single Screw Plastic Extruder is a machine used in the plastic manufacturing industry to transform raw plastic materials into a continuous and consistent shape. It is classified as a type of extruder because it uses a rotating screw to move the plastic material through a heated barrel, where it is melted and turned into a molten state. The heat and pressure applied by the extruder causes the plastic to liquefy and become soft, which allows it to be shaped into a wide range of useful products. The single screw extruder is known for being simple in design, affordable, and easy to operate, making it a popular choice for small to medium-sized plastic manufacturing businesses.
