According to our (Global Info Research) latest study, the global Single Sided Aluminum Based PCB market size was valued at US\$ 2371 million in 2024 and is forecast to a readjusted size of USD 3630 million by 2031 with a CAGR of 6.2% during review period.

Single-Sided Aluminum PCB is an electronic circuit board in which the conductive lines and component pads are only located on one side of the aluminum substrate. It is usually used in electronic equipment that requires good heat dissipation. Its core structure is an aluminum substrate with a layer of conductive copper foil attached to it, and then the components are mounted on it through circuit design and welding. Compared with traditional glass fiber PCB, aluminum substrate has better thermal conductivity and mechanical properties.
