According to our (Global Info Research) latest study, the global Single-sided PCBs market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Single-sided PCB, also known as single layer PCB, which is a type of PCB which comes with only one layer of conducting material on one side of the board and other side is used for incorporating different electronic components on the board. Single layer PCB is widely used in the printed circuit board design in a variety of different electronic sectors where low costs are required. What's more, single layer PCB has been made of various of material, such as paper reinforced phenolic resin with copper foil and glass fiber reinforced epoxy resin with copper foil and so on. Needless to say, single-sided PCB is one of the most commonly fabricated boards as they are very simple and basic to make.

According to our Semiconductor Research Center, the global total output value of PCB was about US\$ 81 billion in 2022. With strong drivers from new technology, such as AI, 5G and new energy vehicles, it is estimated that the PCB industry will continue to grow steadily in the next six years. Global PCB manufacturers are mainly located in China mainland, China Taiwan, Japan, South Korea, Europe and the United States. Among them, Chinese local PCB companies hold the biggest share.
