## Abstracts

According to our (Global Info Research) latest study, the global Single Stage Double Suction Centrifugal Pump market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The single-stage double-suction centrifugal pump is a centrifugal pump designed to handle large flow rates of liquid. It has two liquid inlets and can suck liquid from both sides of the pump at the same time, thereby reducing the load on the impeller and increasing the flow rate and efficiency of the pump. Its single-stage design means that only one impeller completes the pressurization process of the liquid, making its structure relatively simple and suitable for medium pressure applications. Due to the double-suction design, the pump runs more smoothly with lower noise and vibration.
