Single-Stage and Two-Stage Rotary Vane Pumps are common vacuum pumps, which differ in structure, performance and application. Single-stage rotary vane pumps are composed of pump body, rotor, vanes, end covers and springs. The ultimate vacuum is relatively low and the structure is simple. They are used in air conditioning and refrigeration, and small laboratory equipment. Two-stage rotary vane pumps are usually formed by connecting two single-stage pumps in series, which significantly improves the ultimate vacuum. They have high vacuum, strong compression capacity and high pumping speed. They are widely used in semiconductor manufacturing, vacuum coating, vacuum drying and other fields.
