The single-track dispensing machine is an automated dispensing device that is specifically used to control fluids and accurately drip and apply fluids such as glue and paint on the surface or inside of products. Its main structure includes tracks, glue heads, control systems and other parts. The track can be automatically moved according to product requirements, and the glue head can be used to achieve precise control of dispensing. It can complete the dispensing of irregular graphics such as points, straight lines, and broken lines. It has the advantages of high precision, high speed, and high stability. It is suitable for scenes where the fluid coating position needs to be accurately controlled in the product process.
