According to our (Global Info Research) latest study, the global Single-use Bioprocessing Systems market size was valued at US\$ 4485 million in 2025 and is forecast to a readjusted size of US\$ 8981 million by 2032 with a CAGR of 10.5% during review period.

The single-use bioprocessing systems market is rapidly evolving. It focuses on developing disposable bioprocessing equipment and accessories for manufacturing of biopharmaceutical products. Bioprocess is a technique that produces biological materials such as a genetically engineered microbial strain for commercial use. For example, commercially useful chemicals are produced through bioprocess techniques such as microbial fermentation or degradation. The traditional approaches in bioprocessing involve stainless steel equipment that are not just difficult to maintain but also time-consuming and costly.

During 2017, the mAB production segment dominated global single-use bioprocessing system market and is expected to continue its dominance over the next few years. The increased demand for mABs and their continuous assessment in new and expanded clinical indications, will be the major factors driving the growth of this market segment.
