Abstracts

The global Single-Use Flexible Ureteroscope market size is expected to reach \$ 131 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Disposable flexible ureteroscopes are single-use flexible endoscopes used for endoscopic examination and lithotripsy of the urinary system. They can be inserted transurethral into the ureter and renal pelvis and calyces, and feature imaging, bending and steering capabilities, as well as instrument access, reducing the risk of cross-infection and maintenance.

Upstream components mainly include CMOS image sensors, fiber optic/LED light sources, polymer catheter materials, bending and control components, metal braided parts, and sterilization packaging materials; downstream applications primarily target hospital urology departments, day surgery centers, specialist clinics, and stone treatment.

The global unit price of a disposable flexible ureteroscope is US\$3,521, with annual sales of approximately 27,600 units and a global production capacity of 30,000 units. The industry profit margin is 20%.

The global disposable flexible ureteroscope market will continue to upgrade towards high-definition imaging, larger bending angles, thinner endoscopes, and better maneuverability. Simultaneously, driven by infection control, hospital turnover efficiency, and predictable overall usage costs, clinical acceptance will further increase. With the popularization of minimally invasive treatment for kidney stones and the development of outpatient and day surgery, products will accelerate their evolution towards

standardization, ease of use, and synergy with supporting consumables. Market competition will also gradually shift from the sale of single devices to competition for overall urological endoscopy solutions.
