According to our (Global Info Research) latest study, the global Single Use Pumps market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Single Use Pump comprises of five components – the housing, rotor, spring barrel, seal and seal cap. The rotor contains a number of cavities that transport liquid around the pump from the inlet to the outlet. The spring barrel seals the housing membrane onto the rotor. The rotor is turned by a motor and as it rotates a vacuum is created at the inlet. Liquid is sucked into the cavities and transported around the pump where the liquid is wiped into the outlet by the spring loaded membrane.
