According to our (Global Info Research) latest study, the global Single Use Valves market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Single Use Valves are shut-off valves that use diaphragms as opening and closing elements to close the flow path, cut off fluid, and separate the internal cavity of the valve body from the internal cavity of the valve cover. This valve eliminates the burden of manual cleaning and reprocessing of difficult-to-clean parts, while providing excellent performance.
