According to our (Global Info Research) latest study, the global Single Use Video Endoscope market size was valued at USD 512.9 million in 2023 and is forecast to a readjusted size of USD 1462.2 million by 2030 with a CAGR of 16.1% during review period.

Single-use video endoscopes are an emerging technology that integrates components accurate and reliable enough for medical use but inexpensive enough to be suitable for single-patient use. Single-use video endoscopes are suitable for use on highly infectious or immunocompromised patients. The products are already sterile on delivery and thus provide an ideal solution for Hospital & Clinics and practices where flexible endoscopes can only be reprocessed at great cost and inconvenience. Endoscopy is a minimally invasive procedure in which an illuminated tubular instrument is used to enable physicians to examine a hollow organ, passage, or cavity of the body. Unlike non-invasive diagnostic techniques, endoscopes are inserted directly into the body to perform an internal evaluation of the patient and diagnose or monitor health issues in the esophagus, stomach, colon, ears, nose, throat, heart, and urinary tract.

Global main manufacturers of single use video endoscope include Ambu, Boston Scientific and Karl Storz, etc. The top three players hold a share about 82%. The global single use video endoscopes are mainly produced in United States, Europe and China, they occupied for a share over 90%. North America is the largest market, has a share about 48%, followed by Europe and Asia-Pacific, with share 38% and 12%, separately.
