## Abstracts

According to our (Global Info Research) latest study, the global Single Vertical Balancing Machine market size was valued at USD 206.8 million in 2023 and is forecast to a readjusted size of USD 248.9 million by 2030 with a CAGR of 2.7% during review period.

A balancing machine is a measuring tool used for balancing rotating machine parts such as rotors for electric motors, fans, turbines, disc brakes, disc drives, propellers and pumps. The machine usually consists of two rigid pedestals, with suspension and bearings on top supporting a mounting platform. The unit under test is bolted to the platform and is rotated either with a belt-, air-, or end-drive. As the part is rotated, the vibration in the suspension is detected with sensors and that information is used to determine the amount of unbalance in the part. Along with phase information, the machine can determine how much and where to add or remove weights to balance the part.
