Abstracts

The global Single Vertical Balancing Machine market size is expected to reach \$ 270 million by 2032, rising at a market growth of 2.7% CAGR during the forecast period (2026-2032).

A balancing machine is a measuring tool used for balancing rotating machine parts such as rotors for electric motors, fans, turbines, disc brakes, disc drives, propellers and pumps. The machine usually consists of two rigid pedestals, with suspension and bearings on top supporting a mounting platform. The unit under test is bolted to the platform and is rotated either with a belt-, air-, or end-drive. As the part is rotated, the vibration in the suspension is detected with sensors and that information is used to determine the amount of unbalance in the part. Along with phase information, the machine can determine how much and where to add or remove weights to balance the part.

Global Single Vertical Balancing Machine key players include Schenck, DSK, Kokusai, Haimer, CEMB, etc. Global top five manufacturers hold a share about 65%. Europe is the largest market, with a share about 45%, followed by North America, with a share about 25 percent. In terms of product, Automatic Balancing Machine is the largest segment, with a share about 90%. And in terms of application, the largest application is Auto Industry, followed by Heavy Industry, Home Appliances, Aviation Industry, etc.
