According to our (Global Info Research) latest study, the global Single/Multi-Channel Interferometers market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The Single/Multi-Channel Interferometer (This report focuses on an integrated interferometric measurement system for three-dimensional geometric inspection of fiber optic connector end faces) is a precision metrology device that integrates interferometric microscopy, autofocus, and geometric parameter algorithms on a single platform. Architecturally, single/multi-channel integrated interferometers can be categorized as single-channel, multi-channel, and single/multi-channel compatible platforms, and are gradually evolving towards automated, highly integrated, and software-driven intelligent metrology systems.

In the upstream segment, Single/Multi-Channel Interferometers rely on stable light sources, precision optical systems, and high-resolution imaging devices. Sumix states in its product description that its interferometers and microscopes employ high-quality optical designs, enabling laboratory-level measurements in field environments with micrometer-level resolution. They also enhance measurement stability through autofocus and guide hole angle measurement functions. Thorlabs' CC6000 utilizes tilt phase analysis technology for non-contact interferometry and automatically calculates parameters such as radius of curvature, vertex offset, and fiber height via software for rapid quality assessment of single-core connectors.

In 2024, global Single/Multi-Channel Interferometers sales reached approximately 3,680 Units, with an average global market price of around 68.5 K US\$/Unit. Production

capacity reached 4,500 Units, with a gross profit margin of approximately 32%.
