According to our (Global Info Research) latest study, the global Sinterbrazing Paste market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Sinterbrazing paste is a new kind of composite brazing material. It is a paste mixed with brazing powder, flux and binder to form a paste capable of being screen printed onto a substrate or applied to the workpiece via a dispenser. Compared to conventional brazing materials, brazing paste is more suited for automatic application in large quantities. Moreover, their application dosage can be reproduced with high precision. When brazing paste is used with induction brazing, flame brazing, reflow soldering and other methods, extremely high production efficiency can be achieved. At the same time, gas release of brazing flux is relatively low, and braze quality is excellent.
