## Abstracts

The global Sintered AlNiCo Permanent Magnet market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Sintered alnico permanent magnet is a kind of metal element composed of aluminum (Al), nickel (Ni), cobalt (Co), iron (Fe) and a small amount of copper (Cu), titanium (Ti) and niobium (Nb). permanent magnet alloy. Its Curie temperature can reach 890°C, and it has excellent temperature resistance, high temperature stability and corrosion resistance. Sintered alnico magnets are especially suitable for products with small size, light weight, thinness, irregular shape and high surface quality requirements. At the same time, sintered alnico magnets have high dimensional accuracy, small tolerances, and better mechanical strength and processing performance. From a production point of view, compared with cast AlNiCo magnets, sintered AlNiCo magnets have higher material utilization, lower composition segregation and magnetic performance dispersion. The overall magnetic properties of sintered AlNiCo magnets are slightly lower than those of cast AlNiCo magnets, so they have not been widely used. Its main application fields include instrumentation, communication, magnetoelectric switches and sensors.

This report studies the global Sintered AlNiCo Permanent Magnet production, demand, key manufacturers, and key regions.
