Abstracts

Sintered Laminate is made of layers of woven wire mesh with different meshes and diameters through high-temperature sintering. Compared with stainless steel fiber felt, sintered laminates are more strength while compared with P/M products sintered laminates are more permeable. With high-temperature resistance, weldability, reusability, uniform aperture distribution, and long-lasting product life, sintered laminates are widely applied as filter media under high differential pressure and high temperature.

According to our (Global Info Research) latest study, the global Sintered Laminate market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
