According to our (Global Info Research) latest study, the global SiPh Wafer Test System market size was valued at US\$ 100 million in 2024 and is forecast to a readjusted size of USD 545 million by 2031 with a CAGR of 27.5% during review period.

The testing of silicon photonics mainly includes the testing of its optical and electrical performance. The testing is mainly divided into two stages: wafer-level testing and module-level performance testing after packaging. Wafer-level testing refers to the testing and screening of each unit or sub-unit on the wafer with the help of a probe station after the wafer production is completed; module-level performance testing after packaging, when the device is packaged into a module, it is necessary to verify the performance of the module's transmitter and receiver at different ambient temperatures and compliance with relevant specifications. These tests are performed when sending or receiving optical/electrical signals at normal rates, and must strictly refer to relevant specifications.
