According to our (Global Info Research) latest study, the global Siphonic Roof Rainwater Drainage System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The principle of the Siphonic Roof Rainwater Drainage System is to rely on the design of a special rainwater bucket to separate air and water, so that the rainwater riser is in a full flow state. When the water in the riser reaches a certain capacity, the siphon effect occurs. During rainfall, the entire system is able to remove rainwater from the roof surprisingly quickly due to the continuous siphon action.
